Price against the Nifty 50

Absolute change
▲ +74.9%

Relative to the Nifty 50
▲ +66.9 pts

TCS rose 74.9% over the last year, against +8.0% for the Nifty 50: 66.9 percentage points ahead of it.

The deepest fall from a peak inside the window was −29.1% (from the 28 Nov 2024 close to the 18 Jan 2025 close); a later close regained that peak.

Closes through 20 Jun 2025

3Y: only 2.5 years of history · 5Y: only 2.5 years of history · 10Y: only 2.5 years of history. Max shows all of it.

Key points of the window drawn (the stock's own closes; the chart above is indexed to 100)

Point	Date	Close
First close	20 Jun 2024	₹135.63
Last close	20 Jun 2025	₹237.20
Highest close	20 Jun 2025	₹237.20
Lowest close	20 Jun 2024	₹135.63

About this chart

Linear scale: equal steps are equal amounts of price. Best for short ranges.

Source: Yahoo Finance daily closes. Prices are adjusted for splits and bonuses, not for dividends: dividends are neither reinvested nor added back, so these are price returns and understate the total return of a company that pays them. The Nifty 50 line is the index price level, also without dividends, so the stock and the index are measured the same way. Both lines are indexed to 100 on 20 Jun 2024 (units: index points).

Daily closes from Yahoo Finance, adjusted for splits and bonuses, not for dividends. The Nifty line is the index price, without dividends, like the stock. A price change is the stock on its own; the relative figure is the stock minus the Nifty in percentage points. Past prices say nothing certain about future ones.

Daily closes, indexed to 100, split-adjusted, dividends not included

The same chart as a table

Figures

PE 17.8 · ROCE (median) 66.6% · Debt/equity 0.11 · RSI 75 · From 52-week high −24.3%

Material risks

Screen flag level LOW: no flags raised. Screen flag level, counting flags only. Scope: this counts the warning flags the screen raised on the latest annual statements (return on capital, margins, cash flow, interest cover, leverage), valuation against industry peers, daily range, thin trading and a fall of 40% or more from the 52-week high. It does not read the price trend, smaller falls, the market, your position size or the future.

No screen flag was raised. That is not a finding that there are no risks: the screen reads only the ratios and price measures in the scope line, so read the filings and the chart anyway.

In its favour, as the screen lists it

- Earns 67% on capital employed — well above any plausible cost of capital (ROCE 66.6% (3Y median, invested capital))
- Converts 100% of reported profit into operating cash (CFO/PAT 1.00x (median))

Key dated facts and sources

Fact	Date	Source
Last close in the data · ₹2,535.00	Mon 26 Oct	Alpha screen (data provider: Yahoo Finance), daily close
Price chart runs through · last daily close drawn	Fri 20 Jun	Yahoo Finance daily closes, through this app's Worker
Next results · estimated date	Thu 8 Oct	Alpha screen (data provider: Yahoo Finance); an estimate until reported
Latest fiscal year held · FY26	not dated	Alpha screen (data provider: Yahoo Finance), annual statements
Screen built · data through 2026-10-26	Tue 27 Oct	Alpha screen build

Missing evidence

What this app does not hold for TCS, read from the data that is absent. A gap here is not a finding about the company.

- **Event annotations.** Only the next results date is held, and it is an estimate until reported. No dividend, split, filing or announcement is dated in this data, so the chart marks none of them.
- **Valuation history.** Only one number is held, the percentile of the trailing PE against its own past. A PE series is not held, so no valuation history is charted.
- **Ownership series.** The history held covers foreign and domestic institutions over 7 quarters. Promoter holding is held as the latest figure only, with no history.
